

ClearColour PLUS Glass

The Key to perfect viewing pleasure

- ClearColour PLUS Glass is a high quality speciality coated picture framing glass, designed to almost eliminate reflection and provide the perfect view of the framed image.
- ClearColour Glass reduces reflection to less than 1% making the glass in a frame almost invisible.
- ClearColour Glass increases the transmission of light to over 98% providing exceptional viewing clarity.
- ClearColour Glass is 'WaterWhite' and so provides the clearest

A revolutionary combination of UV protection and anti-reflection blocks nearly all destructive UV rays and distracting reflections.

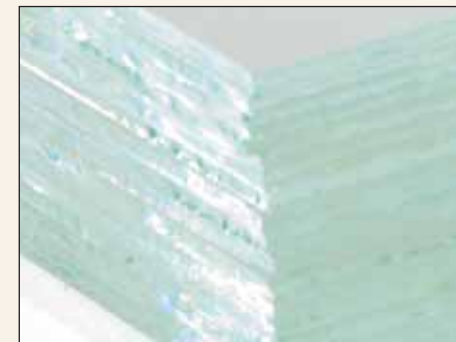

Normal glass reflects strongly and offers little protection against aggressive UV rays.

Why does blocking UV light make a difference?

The UV wavelengths in daylight cause paper to discolour, become brittle and 'aged', and colours to fade, permanently damaging artwork and reducing its value. ClearColour PLUS UV provides over 90% protection from UV light in the damaging 300-400 nanometre wavelength in addition to the anti-reflective and WaterWhite viewing advantages.

Normal glass

Why does 'WaterWhite' glass make a difference?

Making WaterWhite glass involves removing most of the impurities found in normal glass such as iron. This removes the green hue you can see in normal glass and affects the colour rendition of the image; so with ClearColour PLUS you get almost perfect colour rendition of the image and the framing materials.

and most accurate colour rendition of the image.

- ClearColour UV Glass also blocks damaging UV light wavelengths helping reduce damage and fading of the framed image.
